

FINAL SEMINAR · OCTOBER 2026

# Multi-Page Visually Rich Document Understanding

A survey of system design and an empirical attribution of failure

---

Lewei Xu

Supervised by Dr. Yihao Ding · Dr. Daochang Liu

# What this talk covers

|                                  |       |                                    |       |                              |        |                               |       |
|----------------------------------|-------|------------------------------------|-------|------------------------------|--------|-------------------------------|-------|
| 01 BACKGROUND                    | 3 MIN | 02 LITERATURE                      | 5 MIN | 03 EMPIRICAL STUDY           | 10 MIN | 04 CONCLUSION                 | 2 MIN |
| 03 Visually rich documents       |       | 07 Evidence management             |       | 12 Three loci of failure     |        | 23 A simple adaptive pipeline |       |
| 04 Single-page is largely solved |       | 08 Four architectural families     |       | 13 The controlled pipeline   |        | 24 Settled, and still open    |       |
| 05 What breaks at document scale |       | 09 Where each family pays          |       | 14 Datasets and scoring      |        |                               |       |
| 06 Two aims, two papers          |       | 10 Modality pressures              |       | 15 The representation ladder |        |                               |       |
|                                  |       | 11 Selecting, reasoning, iterating |       | 16 Conversion fidelity       |        |                               |       |
|                                  |       |                                    |       | 17 Missing evidence          |        |                               |       |
|                                  |       |                                    |       | 18 Distractor exposure       |        |                               |       |
|                                  |       |                                    |       | 19 Cross-page integration    |        |                               |       |
|                                  |       |                                    |       | 20 Response calibration      |        |                               |       |
|                                  |       |                                    |       | 21 Prompt interventions      |        |                               |       |
|                                  |       |                                    |       | 22 What to spend compute on  |        |                               |       |
